

```
import java.util.Scanner;
class EvenOrOdd {
    public static void main(String[] args) {
        int i;
        Scanner sc=new Scanner(System.in);
        i=sc.nextInt();
        if (i%2==0)
            System.out.println("entered number is even");

        else
            System.out.println("entered number is odd");
    }
}
```
