```java
import java.util.Scanner;

public class ArrayChecker {
    public static boolean areArraysSame(int[] arr1, int[] arr2) {
        if (arr1.length != arr2.length) {
            return false;
        }
        for (int i = 0; i < arr1.length; i++) {
            if (arr1[i] != arr2[i]) {
                return false;
            }
        }
        return true;
    }

    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        // Get size of the arrays
        System.out.print("Enter size of the arrays: ");
        int size = sc.nextInt();

        // Get elements of first array
        int[] arr1 = new int[size];
        System.out.println("Enter elements of first array:");
        for (int i = 0; i < size; i++) {
            arr1[i] = sc.nextInt();
        }

        // Get elements of second array
        int[] arr2 = new int[size];
        System.out.println("Enter elements of second array:");
        for (int i = 0; i < size; i++) {
            arr2[i] = sc.nextInt();
        }

        // Check if the arrays are the same
        if (areArraysSame(arr1, arr2)) {
            System.out.println("The arrays are the same.");
        } else {
            System.out.println("The arrays are not the same.");
        }

        sc.close();
    }
}
```
