```java
import java.util.Scanner;

public class SubStringReplace {
    public static void main(String[] args) {
        // Get input from user
        Scanner scanner = new Scanner(System.in);
        System.out.print("Enter a string: ");
        String inputString = scanner.nextLine();
        System.out.print("Enter the substring to be removed: ");
        String substringToRemove = scanner.nextLine();
        System.out.print("Enter the new substring: ");
        String newSubstring = scanner.nextLine();

        // Replace substring
        String updatedString = inputString.replace(substringToRemove, newSubstring);

        // Print updated string
        System.out.println("Updated string: " + updatedString);
    }
}
```
