```java
import java.util.Scanner;

public class zerosToOnes {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter an integer: ");
        int num = sc.nextInt();

        // Convert integer to string to replace 0's with 1's
        String numStr = String.valueOf(num);
        numStr = numStr.replace('0', '1');

        // Convert string back to integer
        int result = Integer.parseInt(numStr);

        System.out.println("Result: " + result);
    }
}
```
