```java
import java.util.Scanner;

public class ToggleString {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        System.out.print("Enter a string: ");
        String inputString = scanner.nextLine();
        String outputString = toggleString(inputString);
        System.out.println(outputString);
        scanner.close();
    }

    public static String toggleString(String inputString) {
        StringBuilder output = new StringBuilder();
        for (int i = 0; i < inputString.length(); i++) {
            char c = inputString.charAt(i);
            if (Character.isUpperCase(c)) {
                output.append(Character.toLowerCase(c));
            } else if (Character.isLowerCase(c)) {
                output.append(Character.toUpperCase(c));
            } else {
                output.append(c);
            }
        }
        return output.toString();
    }
}
```
